ENGINE MANUFACTURER <b>2 Moteurs YANMAR 45CV.</b>	HORSE POWER <b>2 X 45 CV</b>		

## Description

Following the Tanna 47, the FP | 48 incorporates the very latest innovations from the Fontaine Pajot catamaran range — in terms of layout, onboard equipment, and technology — while maintaining outstanding maneuverability for short-handed sailing. The open sea is calling. The NEW FP | 48 stands out with its unique and forward-thinking layout, designed for those who value space and comfort. A spectacular 3-meter-wide opening, expansive hull windows, and a forward pass-through create a seamless connection with the ocean. The spacious saloon accommodates an enlarged central island, a fully equipped galley with generous storage, and a large settee ideal for gathering the entire crew. Outdoors, you can choose your preferred relaxation area: an aft-facing daybed overlooking the horizon, generous cockpit seating, or the expansive foredeck sunpads. For elevated views, the flybridge offers comfortable seating and sun loungers — perfect both underway and at anchor. At the helm, the intermediate steering position keeps you connected with family and guests while centralizing all maneuvers and enhancing visibility. True to the DNA of the range, the FP | 48 remains a high-performance catamaran that is easy to handle, even with a reduced crew.

Two Innovative and Distinct Configurations The New FP | 48 is available in two exclusive layouts: **Maestro Version – 3 Cabins**

This owner-focused configuration offers expansive, light-filled spaces and a fully customizable master suite. The forward volume can be arranged as a large bathroom, a nursery cabin, or a workshop, depending on your cruising plans. **Quintet Version – 5 Cabins**

Designed for family cruising or charter programs, this version features four spacious double cabins facing the sea, plus an additional cabin with twin bunk beds — ideal for children or crew members. Electric Hybrid Version – ODSea+ With its ODSea+ technology, Fontaine Pajot has developed an in-house hybrid electric propulsion system that maximizes renewable energy use and enhances cruising autonomy. By mastering the entire Research & Development process internally, the shipyard ensures full technological control without reliance on external engine brands.
